

T-5 Hunter Industries Manufacturing Facility Tour

Date: Thursday August 1, 2024

Time: 9:00 AM – 4:30 PM

Note: Limited to 24 participants

Enjoy a scenic 1.5 hour drive down the California Coast past Carlsbad, and then inland to San Marcos. Enjoy great views of the Pacific Coast, as well as a retired nuclear power plant, and Camp Pendleton. Keep an eye out for Osprey aircraft out on flying training missions for the Marines. Arrive at Hunter Industries where their facility inputs plastic beads, rods of stainless steel and bronze – and the output is a variety of sprinklers, including the MP Rotor series. The MP rotor has 21 parts that are fabricated onsite, then assembled using robotic assembly lines. You will be on the plant floor, watching the robots at work. The tour includes R&D areas where new sprinklers are fabricated and tested using the newest 3D printing technologies and talented machinists. They also fabricate all their assembly lines. QA/QC is an important part of the process and you will see it all, and learn about their new lighting systems. The plant tour includes lunch hosted by Hunter Industries. Hunter Industries is pleased to make this opportunity available and to share their customer philosophy, the history of sprinklers used by landscape and large turf industries, as well as their new landscape lighting systems.

Tour Requirements: Participants must be 11 years of age or older, able to take the walking tour and manage stairs, and wear closed toe shoes. Necessary PPE will be provided.

Cost: \$115 per person.

Includes: Roundtrip transportation between Marriott Anaheim and Hunter Industries headquarters in San Marcos, and lunch.
